Hello,

I'm Spencer Mabasa Tasa
Fullstack Web Developer

I am a Full-Stack Developer with expertise in Django, React, and Supabase, complemented by strong skills in JavaScript, HTML, CSS, and jQuery. Over two years, I rebuilt a dynamic project in Django and developed a School Management System and a Guesthouse Booking System. Recently, I worked on a React project deployed on a staging domain and built a portal that extends the functionalities of "Xcally," a contact center system, while seamlessly integrating with its database. This portal is now live on FBC Holdings' VPS server. My focus is on delivering scalable and efficient web solutions tailored to client needs.
